

## CMSC 207: Chapter 1 Homework

February 2, 2026

---

1. The functions  $F$  and  $G$  from  $\mathbb{R} \rightarrow \mathbb{R}$  are defined by the following formulas:

$$F(x) = (x + 1)(x - 3) \qquad G(x) = (x - 2)^2 - 7$$

Prove that  $F \neq G$ .

---

$F \neq G$  means  $\exists x \in \mathbb{R}$  such that  $F(x) \neq G(x)$ . Choose  $x = 1 \in \mathbb{R}$ . Then:

$$F(x) = F(1) = (1 + 1)(1 - 3) = 2(-2) = -4.$$

$$G(x) = G(1) = (1 - 2)^2 - 7 = (-1)^2 - 7 = 1 - 7 = -6.$$

Since  $F(1) = -4$  and  $G(1) = -6$  and  $-4 \neq -6$ , we have  $F(1) \neq G(1)$ . Thus,  $F \neq G$ . ■

2. The relation  $R$  from  $\mathbb{R} \rightarrow \mathbb{R}$  is defined as follows:

$$\text{for all } (x, y) \in \mathbb{R} \times \mathbb{R}, (x, y) \in R \text{ iff } x = y^2 + 1.$$

Prove that  $(17, -4) \in R$ .

---

By the definition of  $R$ ,

$$(x, y) \in R \iff x = y^2 + 1.$$

Substituting  $(x, y) = (17, -4) \in \mathbb{R} \times \mathbb{R}$  we have:

$$\begin{aligned} (17, -4) \in R &\iff 17 = (-4)^2 + 1 \\ &= 16 + 1 && \text{by arithmetic of rhs} \\ &= 17. && \text{by arithmetic of rhs} \end{aligned}$$

Since the  $17 = 17$  is a true statement,  $(17, -4) \in R$  must also be true. ■
